

I support fully the well founded Comment submitted by The American Radio Relay League concerning Docket ET 03-104. I conclude the comments made by individuals and companies which are pushing for Broadband over Power Line (BPL) have little if any credible scientific data to support approval of this docket at this time. Field testing has shown considerable interference to anyone else trying to use 2 MHz - 80 Mhz. Further research and innovations in BPL will be needed to avoid the great risk this innovative technology will not cause irreparable interference to services licensed to operate in the 2 MHz - 80 MHz frequency range. It also appears that approval of ET 03-104 would violate the existing FCC rules on non-interference and would be contrary to the best interest of the public. Many users of the 2 MHz to 80MHz bands are closely involved with not only homeland security, but with safety, health and welfare use. Please, reconsider the BPL use as it stands today.
